# COMPANY PROFILE

**D**allan designs, manufactures and installs automatic production systems for sheet metal working. Dallan technologies range from roll forming and punching up to metal laser cutting technologies.

Established in 1978 by Eng. Sergio Dallan, the company began working as a technical office designing sets of rollers for roll forming. Immediately, it starts the manufacturing of roll forming machines with the Dallan brand. At the beginning of the '80s, with specialization in thin gauge materials processing, Dallan systems became a worldwide benchmark, thanks to innovative technologies and turnkey service for its customers.

Today Dallan offers state-of-the-art solutions for sheet metal industry such as: ROLL FORMING MACHINES, PACKAGING AUTOMATIONS, PUNCHING MACHINES AND LASER CUTTING SYSTEMS.

Having more than 40 years of experience in the field, Dallan operates in more than 80 countries all over the world. It is a benchmark on development of both standard machines and tailor-made systems for the production of high quality products and profiles in the fields of construction, internal finishing, sun protection, hvac, furniture and logistics, lighting and many others.

With 3 manufacturing facilities, Dallan is based in Castelfranco Veneto, in the north-east of Italy, 30 Km from Venice.

In 2018 Dallan opens its first branch in USA, *Dallan America Corporation* based in New York.

# MISSION

Our mission is to develop lean and sustainable technologies, allowing our customers to produce more, with more flexibility and less energy consumption.

Since 1978, the Dallan brand is the benchmark in the sheet metal working market; we are leader in the manufacturing of machines for thin gauge and delicate materials processing. We keep on investing in development of innovative technologies to take sheet metal working to its highest level.

Dallan is a family-owned company which operates worldwide with a strong ethical code and in a responsible way. We believe in an inspiring working environment where our workers and partners keep on training, growing and expressing their talents. This approach, allows us to continue building a better future for our employees, for our customers, and sets a positive example in today's business environment. This uniquely identifies Dallan as the benchmark for the future.

# MACHINES AND AUTOMATION

## ROLL FORMING

Dallan offers a wide range of roll forming machines to fit several different production requirements; in terms of productivity, machinable materials and applications. Our focus is processing delicate and thin gauge materials, from 0.2 up to 3 mm thick.

The Dallan range includes compact machines suitable for start-up companies that want to invest in new markets, up to the most advanced systems for top level productivity with in-line automation and packaging.

The main applications of Dallan production systems include the production of metal framing for drywall, rolling shutters, venetian blinds, T-bar for suspended ceilings, metal doors & frames, HVAC and many others.

## AUTOMATION AND PACKAGING

Dallan offers a complete range of technologies for the automation of production processes that can be integrated with Dallan machines, or used as stand-alone systems. Dallan's automation portfolio, also includes assembly and in-line packaging systems that guarantee a complete product, ready for the market.

We also develop sorting and discharging systems based on customer requests, to be applied in line with Dallan roll forming, punching and laser cutting systems.

# MACHINES AND AUTOMATION

## PUNCHING MACHINES

For over 40 years Dallan has developed and optimized a complete range of punching machines from coil, to satisfy all varieties of production needs. The Dallan Catalogue of CNC punching machines includes both, hydraulic and servo-electric machines. Dallan's exclusive parametric software is the easiest solution to simplify the programming of parts with similar geometry, starting from standard excel tables. We also offer standard and customized solutions for the production of ceiling panels.

## LASER CUTTING

Dallan's CNC laser cutting machines are unique to the market in how they can work from coil or from standard sheets. All the machines are equipped with the exclusive, high definition vision system that guarantees high precision and maximum flexibility during production. Several models are available and it is possible to customize solutions based upon customer requests.

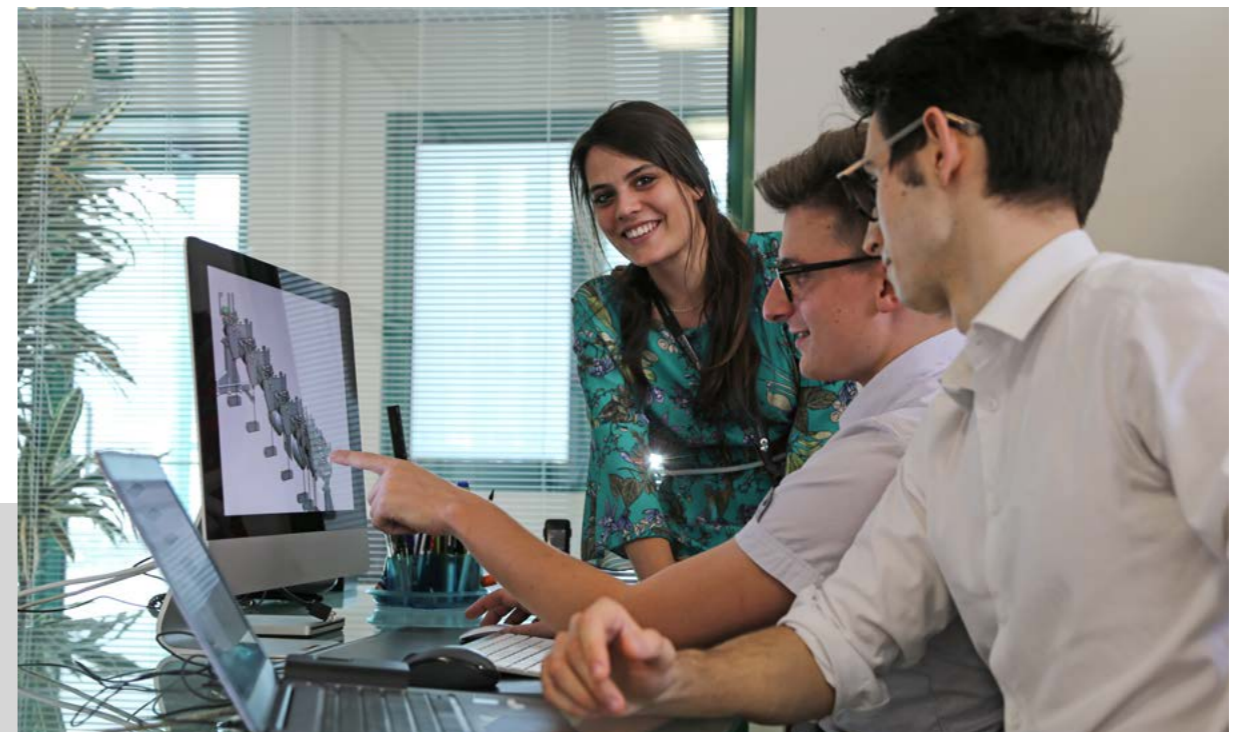

Dallan has also developed combination systems, that implement both CNC punching & laser technologies (in the same lean manufacturing line), to reach the highest levels of productivity and flexibility.

Since 1978, Dallan has been setting itself apart from the competition by continuously innovating new and more productive solutions, and by always focusing on the best solution for its customers. All this is possible, thanks to a team of 160 professionals that every day contribute to the success of our customers' projects.

Here at Dallan we enhance the people's potential, we invest in the education of our employees and we encourage the individual growth. Relying on Dallan's team, is a competitive advantage for our customers all over the world, and we are proud of this identification of Dallan.

As a family-owned company, we strongly believe in the potential of young people that will be the experts of the next generation. For this reason, we interact with the schools and the universities, in order to build strong relationships with them and to give (even more) value to the "made in Italy" products.
